TO WHOM IT MAY CONCERN

I am content to recommend Mr Vyom Khanna, an applicant for the Master's Program at your esteemed University. As an Assistant Professor (Sr. G) of the Mechanical Engineering Department at SRM Institute of Science and Technology and also being Vyom's Faculty Advisor, I got the chance to observe him personally apart from the curriculum for four years.

I taught him Fluid Power Control in his sixth semester and guided him in other core subjects like Engineering Graphics. From my observations, I conclude that he is attentive and always possesses a positive attitude towards academics and learning new things. Vyom has always shown a keen interest in practical aided learning techniques. For his Major project, he chose the significantly complex topic of Robotics where he published a research paper along with his guide and peers, the paper titled, "Autonomous Staircase Climbing Robot for Rescue Operation".

Moreover, his involvement in his Major Project was commendable. I noticed him working late after class to finish his tasks and learn Arduino codes for his project. His never-ending interest in Automation and finding insights wherever possible justify his passion for this sector. Furthermore, he is always ready to take up responsibilities apart from his curriculum and, he carries out his duties with immense dedication and sincerity.

I am sure that he possesses all the required traits for enrolment at your well-known University. Considering his interest in pursuing higher studies and his scholastic promise for his studies, I am certain of his ability to succeed as a student. If you have any further queries, please do not hesitate to contact me.
