April 2025 vs April 2026 - What the Data Tells Us

Visitors 2026

87,193

-5.9%

Revenue 2026

£2.09M

+4.6%

Rev / Visitor

£23.97

+11.1%

01 Key Patterns & Trends

Footfall declined 5.9%

87,193 visitors in 2026 vs 92,643 in 2025 - yet revenue rose 4.6% to £2.09M, driven by higher per-visit spend.

Revenue per visitor up 11%

Average spend rose from £21.58 to £23.97 - indicating a pricing or mix shift towards higher-value tickets.

Easter shifted to start of month

Easter fell 3–6 April in 2026 vs 18–21 April in 2025, reshaping the daily demand curve significantly.

Family Easter peak grew 15.2%

Family visitors during Easter week rose from 3,871 to 4,458, outperforming the overall Easter uplift of +2%.

Daily Visitor Volume - April 2025 vs 2026

Roman Baths Visitor Insight | April 2025 vs April 2026

02 Possible Drivers & Influencing Factors

Easter Calendar Effect

Easter 2026 fell in early April, concentrating high family demand earlier. The rest of April saw reduced footfall, as schools returned to term - partially explaining the month-wide dip.

Family Campaign Uplift

The Spring 2026 Easter Egg Trail campaign appears to have successfully attracted more families during the Easter window (+15.2%). However overall family visitors for April fell 16.4% - suggesting the campaign drove timing, not volume.

Group Visitor Decline (-14.3%)

Organised groups (school trips, coach parties) fell significantly. This may reflect school calendar timing relative to Easter, cost pressures on group organisers, or group bookings shifting to other months.

Ticket Pricing / Mix Effect

Revenue per visitor rose 11% despite lower footfall. This may reflect price increases, a shift in ticket mix towards higher-value tickets (adults vs children), or fewer free and concession visitors.

Channel Data Anomaly

The 'Web' purchase channel fell from 38,186 to just 343 - almost certainly a data reclassification rather than a real drop. This inflated Walk-Up figures in 2026 and must be investigated before drawing channel conclusions.

External Macro Factors

Cost-of-living pressures may be suppressing leisure spend. Competitor attractions, weather differences and changes to public transport access could all affect comparison. These are hypotheses to test - not conclusions.

03 Recommendations for Further Investigation

01

Investigate the Purchase Channel Data Anomaly

Web bookings appear to have dropped 99% - almost certainly a reclassification, not a real trend. Before any channel strategy decisions are made, the booking system data must be audited. Clarify whether 'Walk Up' now includes online day-of purchases. Without this, channel and advance/walk-up analysis is unreliable.

02

Quantify True Campaign ROI - Easter Egg Trail 2026

The campaign shows a promising Easter week family uplift (+15.2%) but overall April family numbers fell. To assess true impact we need campaign cost data, booking attribution (did families cite the campaign?), and a comparable non-campaign period. We should also explore whether the campaign pulled existing visitors into Easter week rather than generating genuinely new visits.

03

Understand the Group Visitor Decline

Group bookings fell 14.3% - a significant segment with a distinct revenue profile (£20.45/head vs £24.87 for individuals). Root causes are unclear: school term timing, group organiser cost sensitivity, or lead time booking patterns. A targeted survey of group bookers, combined with forward bookings data, would determine whether this is a temporary calendar effect or a structural trend requiring intervention.

04 If I Had More Data - Enhancing the Analysis

Additional Data I Would Request

Visitor postcode / origin

Understand domestic vs international split, catchment area

Weather data

Correlate footfall with temperature and rainfall day-by-day

Repeat visit / loyalty data

Are we retaining visitors or always reliant on first-timers?

Dwell time & in-site spend

Café, shop, audio guide - total economic value per visit

Marketing attribution

Which channels (social, OOH, PR) drove which bookings?

Competitor attendance

Thermae Spa, Fashion Museum - is the wider Bath offer growing?

If This Were My Business...

Build a demand forecasting model

Use day-of-week, weather, school holidays and event data to predict daily capacity needs 4–8 weeks ahead.

Dynamic pricing by demand band

Incentivise off-peak visits (Mon–Thu, non-holiday) with targeted discounts; protect weekend yield.

Introduce a visitor CRM

Capture email at point of sale; enable re-engagement, loyalty tracking, and campaign attribution.

Family segment strategy

Convert Easter campaign wins into year-round family visits through holiday trail programmes and family membership.

Group pipeline management

Proactively re-engage lapsed group bookers; offer early-bird rates; assign a dedicated group sales contact.

Summary

- Revenue is growing (+4.6%) despite lower footfall - spend per visitor is up 11%
- The Easter campaign shows promising family uplift, but needs proper attribution analysis
- A data anomaly in purchase channel data must be resolved before channel strategy decisions
- Group visitor decline (-14.3%) is the most commercially significant trend to investigate
- With richer data - postcode, weather, CRM - insight quality could be dramatically improved
