

BI Developer & Analytics Engineer with 4+ years of experience delivering end-to-end analytics solutions across financial services, social housing, sports media, hospitality, & automotive sectors. Core expertise spans data analysis, BI engineering, dimensional data modelling, & ETL/ELT pipeline development - surfacing insights from complex datasets & translating findings into decision-ready reports & dashboards for technical & non-technical stakeholders. Comfortable writing complex SQL queries & presenting to C-suite & operational audiences, in compliance with UK GDPR, DPA 2018, & FCA. Hold MSc in Data & Decision Analytics from the University of Southampton.

Data & BI Analyst Jan 2025 – Present

Contractual, Hybrid/Remote, UK

Note: Some of the short-term contracts (IR35) & project-based engagements are across retail, hospitality, social housing, financial services, & sports analytics, currently at Spotlight Sports Group.

- **Spotlight Sports Group | 5 months: Built** a subscriber, churn, & revenue performance dashboard in Looker Studio using Snowflake SQL views as a semantic layer - serving as the leadership team's single source of truth, designed for executive consumption without requiring technical interpretation.
 - **Developed** app-based article performance scorecard views across multiple content verticals, tracking delivery progress & reporting status updates to stakeholders.
 - **Maintained** a shared tracker for delivery visibility across metric definition & sign-off workstreams, covering dependencies & stakeholder milestones, proactively surfacing blockers & reporting status updates to keep delivery on schedule.
- **GreenSquareAccord | 3 months: Designed** a Power BI dashboard across 24,000 properties & 15,000 repair jobs, built on a Kimball star schema & centralised DAX Table with postcode-level & EPC-based transformations for compliance & cost analysis.
 - **Surfaced** £52K in potential annual contractor savings & flagged 7,600 EPC D-or-below properties as the primary Decent Homes 2 compliance risk, feeding directly into Tenant Satisfaction Measure reporting.
 - **Established** a data dictionary covering KPI definitions, DAX calculations, source tables, data grain, & known limitations for every metric in the reporting suite, serving as the single reference for cross-departmental disputes & compliance audits.
- **Avis Budget Finance | 3 Months: Built** a machine learning demand forecasting model for car allocation across airport locations, engineering features from weather conditions, vehicle type, & location data, evaluating Linear Regression, Random Forest, & XGBoost to identify the strongest predictor of demand patterns.
 - **Delivered** fleet distribution recommendations based on model outputs, identifying key demand drivers by location & vehicle type to reduce misallocation risk & support more informed operational planning decisions.
 - **Developed** Python predictive models incorporating historical demand signals & weather variables, producing a forward-looking demand signal at airport level to reduce reliance on manual estimation.
- **Frasers Hospitality | 4 Months: Delivered** an On-The-Books vs Forecast revenue dashboard across cities, identifying a 28.84% revenue gap driven entirely by volume shortfall & surfacing day-of-week variance indicating a corporate demand profile.
 - **Documented** ETL flow across all pipelines - mapping data flow from source systems through staging, transformation, & presentation layers - enabling faster debugging, audit-readiness, & transparent handover.
 - **Optimised** an underperforming Power BI dashboard by migrating calculated columns upstream into SQL, reducing report load time from 5 minutes to 30 seconds & enabling daily use by operational stakeholders.
- **Poundland & Dealz | 2 Months: Built** a loss-prevention dashboard tracking shrinkage by category, time of day, & department, giving store & area management a ranked view of avoidable losses to prioritise intervention & support decisions on security deployment & stock handling.
 - **Produced** area-wide MI packs consolidating like-for-like sales, labour cost %, & stock availability across the South East region, with store-facing report guides & field definitions for non-technical staff.
 - **Delivered** SKU-level performance reports analysing units per transaction, basket behaviour, & category trends, enabling data-led ranging & shelf allocation decisions.
- **Oodle Car Finance | 3-Months: Identified** urban applicants as 65% more likely to result in a funded loan than rural, ages 36–65 representing 78% of all funded loans, & the Urban 51–65 Convertible segment as the highest-value cohort at 50.4% funded rate - delivering a targeted marketing investment recommendation to the commercial team.
 - **Audited & redesigned** low-adoption Power BI dashboards, resolving SQL performance issues, rebuilding the visual layer, & adding missing KPIs for daily stakeholder monitoring.
 - **Implemented** Python data validation scripts covering row counts, null checks, & anomaly detection at each stage of the analysis pipeline, flagging structural nulls, source system fallback values, & outlier deposit-to-loan ratios - ensuring findings were built on a clean, defensible dataset.

Business Intelligence Developer

Team Computers Pvt Ltd (Client: Care Health Insurance), India

- **Led** end-to-end delivery lifecycle across BI projects - gathering stakeholder requirements, documenting metric definitions & data grain, managing UAT sign-off via Excel & Jira-based project trackers, & designing full-stack analytics solutions using SQL, Python, dbt, Power BI, Qlik & Snowflake, transforming raw data into insights, KPIs, & visualisations with ML-based analysis where required.
- **Delivered** automated, cross-departmental insight dashboards that helped reduce daily pending claims from 80K to 38K, enhancing customer experience & operational efficiency.
- **Standardised** BI data models by redesigning Snowflake schema to Kimball star schemas & optimising SQL, DAX, & Qlik ETL/ELT logic; further reduced processing time from 8 hours to 5 hours by migrating calculated columns upstream, centralising measures into a dedicated table, & simplifying DAX logic across multiple dashboards.
- **Delivered** an integrated CRM dashboard surfacing NPS, churn patterns, & renewal trends that identified that 70% of non-renewals stemmed from premium hikes & poor reminders, directly informing automated renewal communications that contributed to a 15-20% retention uplift within three months.
- **Concurrently delivered** three high-priority BI initiatives - Sales Executive Report, Claims Automation, & Commission Optimisation - building reusable ETL pipelines & data models that reduced build time across all three & delivered on time & recognised for stakeholder coordination under pressure.
- **Built** a four-module executive reporting system for the MD across Claims, Finance, Sales, & Actuarial, integrating real-time KPIs via modular SQL & DAX in Power BI as a standard reference for MD reviews, forecasting, & strategic planning organisation-wide.
- **Transformed** raw transactional data into **business-ready fact tables** & conformed **dimension tables**, enabling consistent KPIs & cross-functional reporting, resulting in cutting ad hoc reporting by 25%.
- **Developed** Power BI dashboards analysing customer behaviour across insurance products, helping reduce claim resolution time by 20% & improve customer retention by 15%.
- **Migrated** 100+ reports from Excel to Power BI/Qlik, **automating** delivery via Python, Qlik NPrinting, & QMC - reducing manual effort by 70% & ensuring PHI-free outputs aligned with IRDAI compliance requirements.
- **Developed** Python predictive models to flag high-risk claims, enhancing fraud detection & underwriting precision.
- **Mentored** non-technical business users through Power BI adoption & junior analysts in SQL, DAX, & Qlik - producing plain-language user guides & conducting hands-on walkthroughs to build capability across technical & non-technical audiences.
- **Deployed** a Sales Incentive Power BI Dashboard for payroll & performance, ensuring error-free payouts for sales staff & supporting a double-digit sales uplift within 6 months.

Data Analyst

Nipa International, India

- **Streamlined** ERP reporting by building a batch-based Python-MySQL data pipeline to automate extraction, cleaning, & visualisation preparation, reducing processing time by 20%.
- **Supported** the preparation of reporting datasets by structuring transactional data into **fact & dimension tables** for operational KPI analysis.
- **Automated** Excel & SQL reports to track production KPIs, efficiency, downtime, & defects, for faster performance monitoring.
- **Uncovered** ₹25L (£24K) in potential annual savings through material waste analysis.

University of Southampton, UK

Sep 2023 – Sep 2024

MSc Data & Decision Analytics (Merit) – School of Mathematical Sciences

SRM Institute of Science & Technology, India

BTech in Mechanical Engineering (Merit)

Jul 2016 – Aug 2020
